

Project Initialization and Planning Phase

Date	04 July 2026
Team ID	
Project Name	A Comprehensive Measure of Well-Being
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

The Human Development Index (HDI) Prediction System aims to assist researchers, policymakers, and students in estimating a country's Human Development Index using key socio-economic indicators. The project uses Machine Learning to provide quick and accurate HDI predictions, reducing the need for manual analysis. A clearly defined customer problem statement helps identify user needs, understand existing challenges, and develop a user-friendly web application that supports faster and more informed decision-making.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A government policy analyst	Predict a country's HDI quickly	Calculating HDI manually takes a lot of time	It requires analyzing multiple socio-economic indicators	Frustrated and delayed in making policy decisions
PS-2	A researcher or data analyst	Analyze and compare the development level of different countries	Large datasets are difficult to process manually	Multiple factors such as education, health, and income must be analyzed together	Overwhelmed and less confident in the analysis
PS-3	A student or educator	Learn how Machine Learning predicts HDI	Existing methods are complex and difficult to understand	There is no simple interactive tool for experimentation	Confused and unable to understand the prediction process effectively
