

Problem-Solution Fit

Date	04 July 2026
Team ID	
Project Name	A Comprehensive Measure of Well-Being
Maximum Marks	5 Marks

Problem-Solution Fit Canvas:

Use the framework below to ensure your proposed solution accurately addresses the root causes, behaviors, and limitations of your target audience. Fill out the canvas in the respective boxes just like the original visual template.

1. CUSTOMER SEGMENT(S) [CS] - Government Policy Makers - Researchers and Data Analysts - Students and Educators - NGOs and Development Organizations	6. CUSTOMER LIMITATIONS EG. BUDGET, DEVICES [CL] • Limited technical knowledge. • Limited access to data analysis tools. • Time constraints. • Dependence on manual calculations.	5. AVAILABLE SOLUTIONS PROS & CONS [AS] Pros • UNDP reports provide reliable HDI data. • Existing statistical tools support analysis. Cons • Manual calculations take time. • Most tools do not provide instant predictions. • Limited interactive web-based solutions.
2. PROBLEMS / PAINS + ITS FREQUENCY [PR] • Manual HDI calculation is time-consuming.	9. PROBLEM ROOT / CAUSE [RC] • HDI depends on	7. BEHAVIOR + ITS INTENSITY [BE] • Frequently searches for HDI information.

- Analyzing multiple socio-economic indicators is difficult. - Existing methods require technical knowledge. - Quick and accurate HDI prediction tools are limited.	multiple socio-economic factors. - Manual analysis is slow and complex. - Lack of simple prediction systems. - Difficulty interpreting large datasets.	- Collects socio-economic data. - Compares country development indicators. - Uses prediction results for analysis and decision-making.
3. TRIGGERS TO ACT [TR] - Need for faster HDI prediction. - Requirement for data-driven decision making. - Educational and research purposes. - Comparing development levels of different countries.	10. YOUR SOLUTION [SL] Develop a Machine Learning-based HDI Prediction System using Python, Linear Regression, and Flask. The application accepts Life Expectancy, Expected Years of Schooling, Mean Years of Schooling, and GNI per Capita as inputs, predicts the Human Development Index (HDI), and displays the corresponding development category through a simple, user-friendly web interface.	8. CHANNELS OF BEHAVIOR [CH] ONLINE - Web Application - Kaggle Dataset - Research Websites - UNDP Reports
4. EMOTIONS BEFORE / AFTER [EM] Before - Confused - Frustrated - Uncertain After - Confident - Satisfied - Better informed		OFFLINE - Academic Research - Government Reports - Classroom Learning - Policy Discussions
